

## Short Course #5: The Emerging Carbon Capture and Storage Industry: An Overview

- Date:** Thursday, June 30, 8:00 am – 5:00 pm (Lunch, morning and afternoon snacks provided)
- Instructor:** Dr. James Myers, Director, Wyoming Carbon Capture & Storage Technology Institute (WCTI)
- Location:** Teton Room
- Fee:** \$200 (Professionals), \$90 (Students); after May 25<sup>th</sup>: \$220 (Professionals), \$90 (Students)
- Limit:** 30 persons

**Description:** Climate change is a problem affecting the world and its people. Substantially reducing emissions of greenhouse gases, such as CO<sub>2</sub> via carbon capture and storage (CCS), would help mitigate this global challenge. Moving CCS from the demonstration to commercial scale will require a large, professional workforce of geoscientists, engineers, environmental specialists, managers, regulators and legal experts. This course provides an overview of the CCS industry, its regulatory and legal frameworks, best practices for site characterization, underground injection control and public outreach and education. Come see where your future career opportunities lie in this evolving industry!
